

UFED LINK ANALYSIS 2.1

Release Notes

Tagging

Reviewing large amount of data is a growing challenge, while parts of the data are important to the investigation, others may not be relevant. The UFED Link Analysis now enables you to manage the investigation data based on your needs by tagging data items.

- Data item can be tagged with a single or multiple tags
- Customize the tagging – you can define additional tagging required to your working process
- Filter data based on the tags – all the views can be filtered based on the tags. This enables to filter out irrelevant events and remain only with the important one

Locations, Images, Videos and Audio are Now Presented in the Timeline View

The timeline now contains additional data types, to enable a better view of event sequences performed by the subject under investigation.

- Image, video and audio files are presented based on their captured date and time as they appear in the file metadata. If the captured date is not available, file creation data will be used
- Locations are presented containing latitude, longitude, data type and logged date and time

Attachment Presentation

The UFED Link Analysis now presents attachments from MMS, emails, chat messages and notes.

Person Data Types Enrichment

Person data now includes additional data types available in the mobile device including application usage and installation, user dictionary, searched items, maps and data files

UFED Link Analysis is now compatible with Windows
