

# UFED Physical Analyzer / Logical Analyzer 3.9.8 Release Notes

iOS 7.1.2

## Physical, File System, Advanced logical and Logical extractions from Apple devices running iOS 7.1.2

Cellebrite announces the support of extractions from Apple devices running iOS 7.1.2 via the current UFED 3.0.7 and the new version of UFED Physical/Logical Analyzer 3.9.8.

### Update your UFED Physical/Logical Analyzer to 3.9.8 to perform:

- Physical and file system extractions while bypassing simple and complex passcode\*
- Advanced logical extraction\*\*
- Simple passcode recovery
- Real-time decryption and decoding of data and applications

Solved issue: Decryption of WhatsApp dbcrypt7 database.

Note: Update of the new EPR is required via the UFED Physical Analyzer.

### Continue working with your current UFED 3.0.7 to perform:

- File system and logical extractions

### \* **Supported devices for physical and file system extractions using UFED Physical**

**Analyzer:** iPhone 4 GSM, iPhone 4 CDMA

Note: All data can be extracted and decoded if the complex passcode is known. Without the complex passcode, selected files, such as emails and keychain, will not be available.

### \*\* **Supported devices for file system, logical and advanced logical extractions:**

iPhone 4/4S/5/5C/5S, iPad 2/3rd Generation/4th Generation/mini, iPod Touch 5th Generation

**Upgrade UFED Physical/Logical Analyzer 3.9.8 Now!**
